Project Description: Network Simulator

Further info:

Ns-3 is a discrete-event network simulator, targeted primarily for research and educational use. ns-3 is free software, licensed under the [GNU GPLv2 license](#), and is publicly available for research, development, and use.

The goal of the ns-3 project is to develop a preferred, open simulation environment for networking research: it should be aligned with the simulation needs of modern networking research and should encourage community contribution, peer review, and validation of the software.
