Project Description: 5G-EmPOWER is an open Mobile Network Operating System for SDN&NFV research and experimentation in heterogeneous mobile networks. Its flexible architecture and the high-level programming APIs allow for fast prototyping of novel services and applications

Further info

5G-EmPOWER blurs the line between radio and core network introducing the concept of Programmable Data Plane which abstracts the radio and packet processing resources available in a network and exposes them to network service developers via a high-level intent-driven application framework.

5G-EmPOWER natively support multi-tenancy allowing MVNOs to specify RRM policies separately for each slice while ensuring performance isolation between and efficient spectrum utilization.
