- Status: Active

Project Description: ECOMP is an infrastructure delivery platform and a scalable, comprehensive network cloud service. It provides automation of many service delivery, service assurance, performance management, fault management, and SDN tasks. It is designed to work with OpenStack but is extensible to other cloud and compute environments. ECOMP is the engine that powers software-centric network.

Further info: ECOMP is one of the most challenging, complex and sophisticated software projects in AT&T's history.
