Project Description: Odin is an SDN framework programmable enterprise WLANs. It provides a platform for developing typical enterprise WLAN services such as mobility management, load balancing, seamless handover, etc. as "network applications". It was initially developed by Lalith Shuresh (<https://github.com/lalithsuresh>). This is a fork with some improvements, being added within the H2020 Wi-5 (What to do With the Wi-Fi Wild West) Project (see <http://www.wi5.eu/>).
